Lesson-plan delivery audit

WHAT C1 ACTUALLY RECEIVED, CALL BY CALL

C1 is the condition that adds the lesson plan's design to C0's curriculum objective. One core step is one independent model call, so a key that the plan had nothing for is simply absent from that call's prompt — and once rendered, absent and withheld look the same. This pack reports, per call, which of the six keys arrived and what in the plan explains each miss.

✓ = the key reached this call · — = it did not

t3-w05 · Three dimensional shapes II

Three dimensional figures: properties of cylinders and spheres, and volume · Third Term, week 5 · 2 core steps = 2 C1 calls · 1 evaluation step

Call	Step	entry behaviour	instructional materials	current step	instructional events	student tasks	assessment points
1	step-t3w05-02	✓	✓	✓	✓	✓	—
2	step-t3w05-03	✓	✓	✓	✓	—	✓

Call 1 · step-t3w05-02 — Step 1

lo-t3w05-01: identify properties of cylinders and spheres

assessment_points did not arrive — her evaluation questions name lo-t3w05-02, not this step's lo-t3w05-01.

Call 2 · step-t3w05-03 — Step II

lo-t3w05-02: find the volume of a cube and a cuboid

student_tasks did not arrive — no block on this step is typed practice (3x explanation), and her Student Activity is 'listen and ask questions where they do not understand', 'copy worked examples into their notes', which is reception.

Task-shaped lines in her note for this step, and what the note does next. Decide each against the source page: only the page says whether she set it.

> Calculate the volume of the prism below.
>
> followed by “Solution:” — she solves it on the page — a worked example, not work set

☐ work she set ☐ work she demonstrated ☐ not a task
