What each condition supplies, and what the pack is built from

6 lessons · four conditions · one draw each, from the `clean-six` run.

> A pack has layers, and they are not interchangeable. An explanation, a worked example and a practice question each need a different kind of input to be written *from the lesson* rather than from what the model already knows about the topic. This traces each layer of the output back to the input layer that could have supplied it.

THE CONDITIONS

Condition	What it adds
`C0`	The curriculum objective alone. No lesson plan, no note.
`C1`	The objective plus the lesson plan's design: position, method labels, materials, entry behaviour and assessment.
`C2`	C1 plus the lesson note as source evidence.
`C3`	C2 plus a validation and repair pass over the draft.

grounded the input layer that should supply it is present · **substituted** it is absent and a different layer stood in · **unsourced** nothing in the input supplies it, so the model wrote it from its own knowledge.
