Project defence demo: walkthrough

Plan-to-Tutor teacher app. Screenshots from a rehearsal with replay on: no model was called.

1	Frame	1 min
2	Reuse a lesson plan and approve it	2 min
3	Reuse its lesson note	1 min
4	Bring in the class's results	1 min
5	A revision note, played back	2 min
6	Each learner's own note, played back	2 min
7	Plugins: switch on slides, show the class deck	3 min
8	The study	3 min

1. Frame

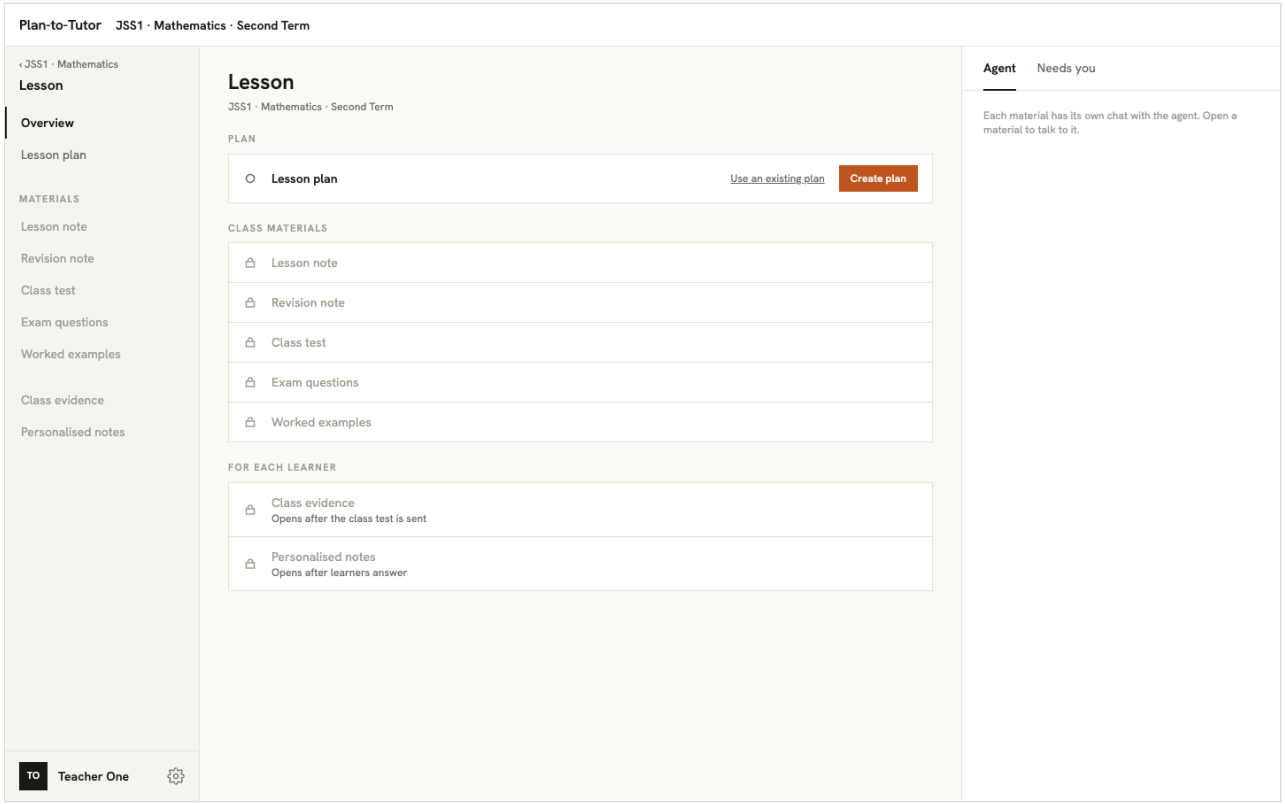

1 min

Say: the framework (CLCG) is the design. The prototype is the software that applies it. The study is the prototype configured for JSS1 mathematics and scored by human raters. The lesson in this demo is one of the study's own lessons. Nothing in the demo waits on a model: each material is played back from a run recorded beforehand.

2. Reuse a lesson plan and approve it

2 min

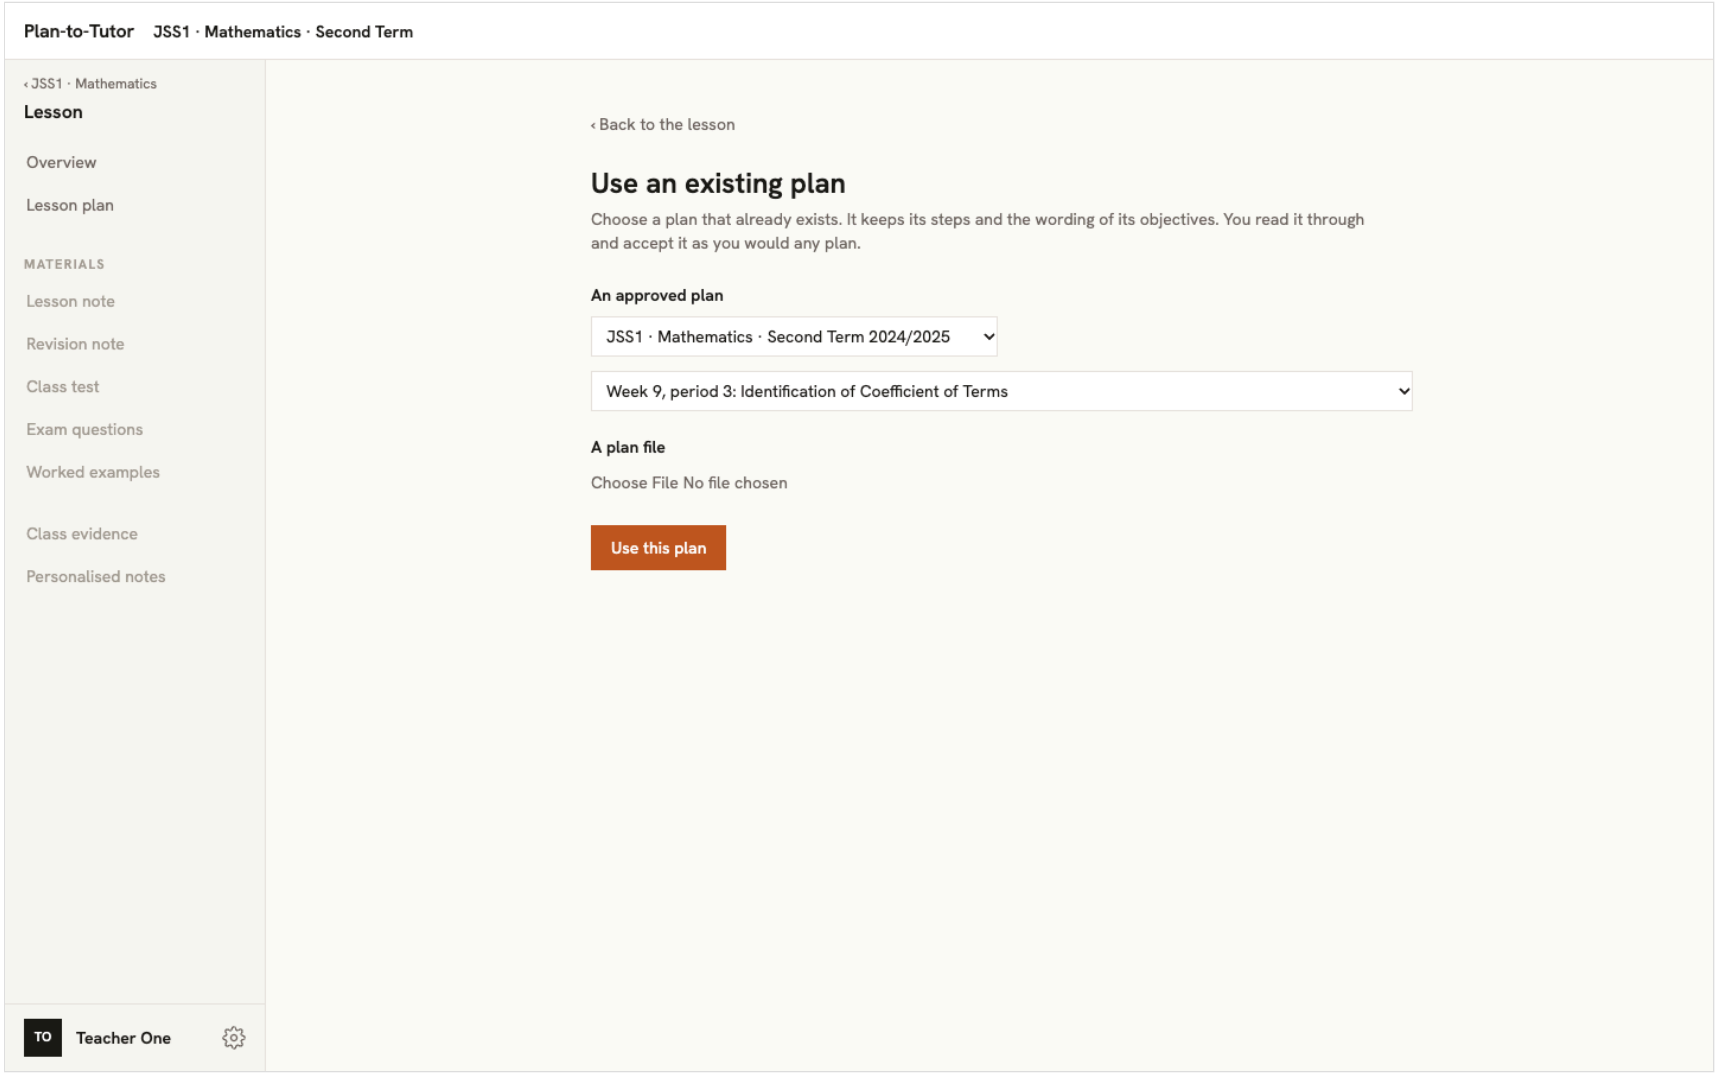

Open the lesson. Its plan row offers Create plan, with the quiet link Use an existing plan. Choose An approved plan, the class and the lesson whose plan you want, then Use this plan. The plan opens as a draft, keeping the study's steps and the wording of its objectives. Basis for the plan is closed; steps open one at a time. In Needs you, tick that the plan meets the requirements and click Approve. Approval unlocks the class materials and asks for the class test, which is played back.

The lesson home before anything is made.

2. Reuse a lesson plan and approve it (continued)

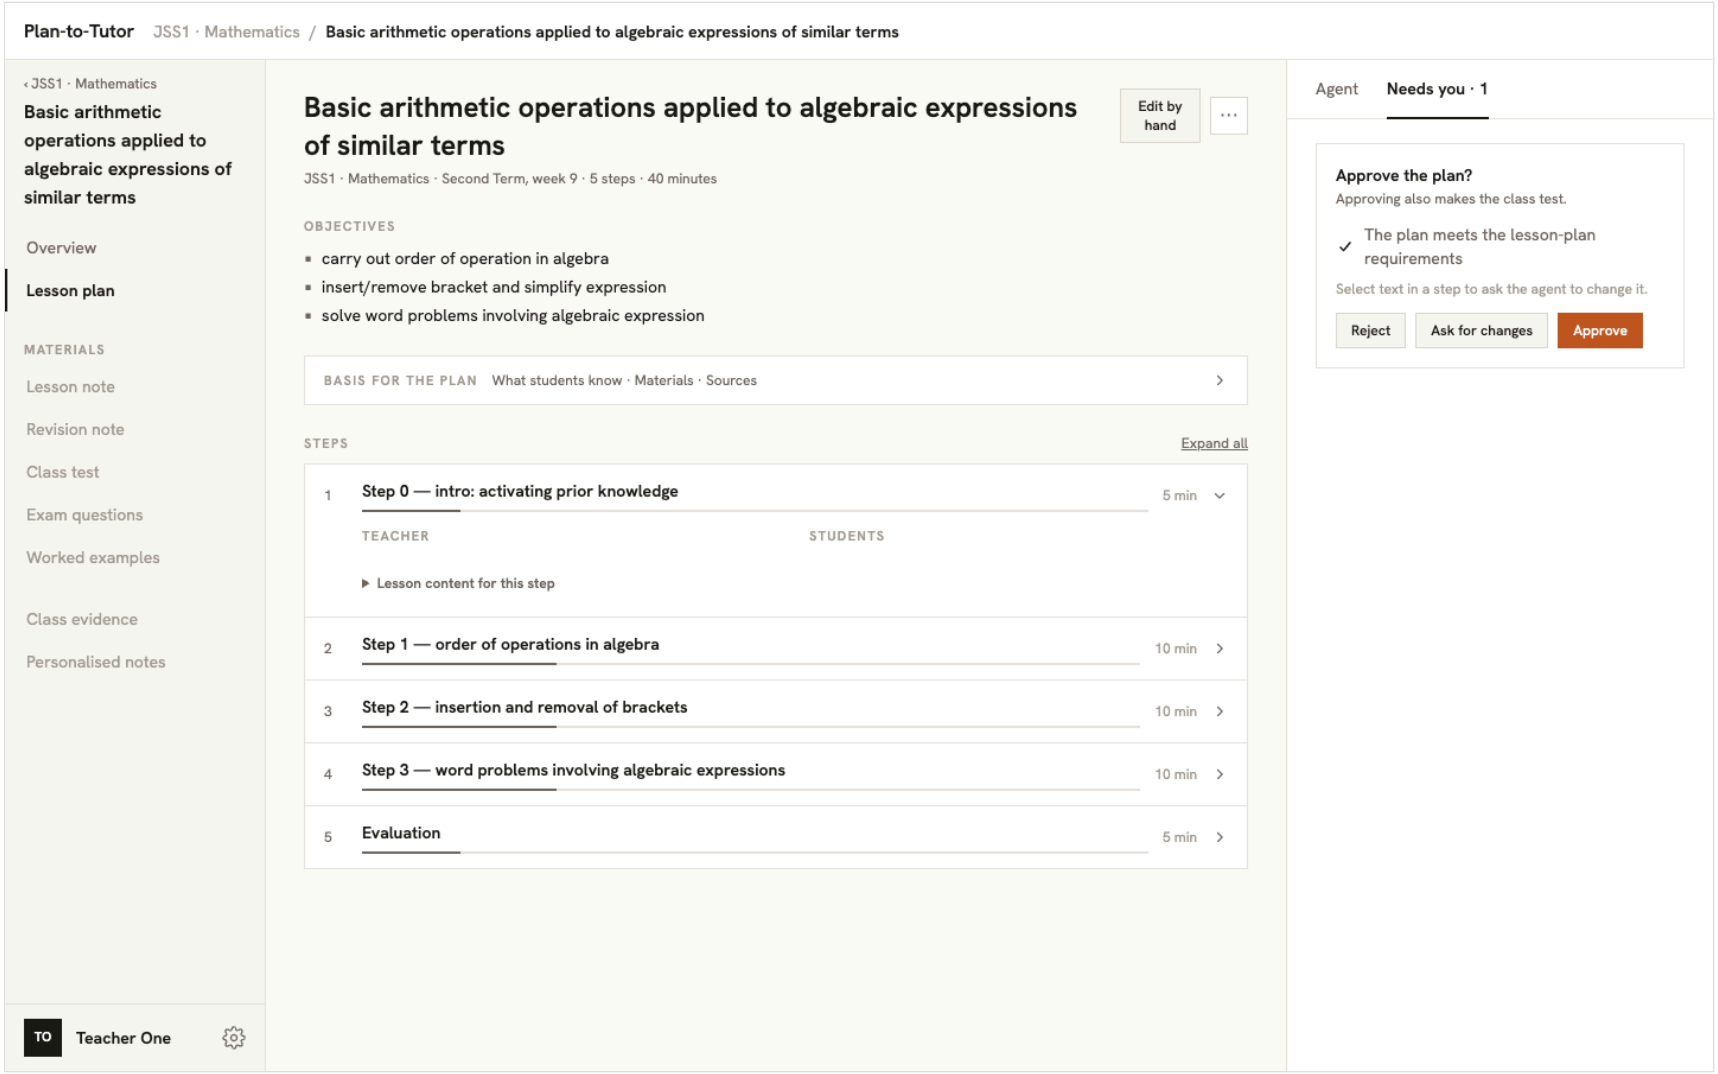

2 min

Use an existing plan: choose the class and the lesson whose plan to reuse.

2. Reuse a lesson plan and approve it (continued)

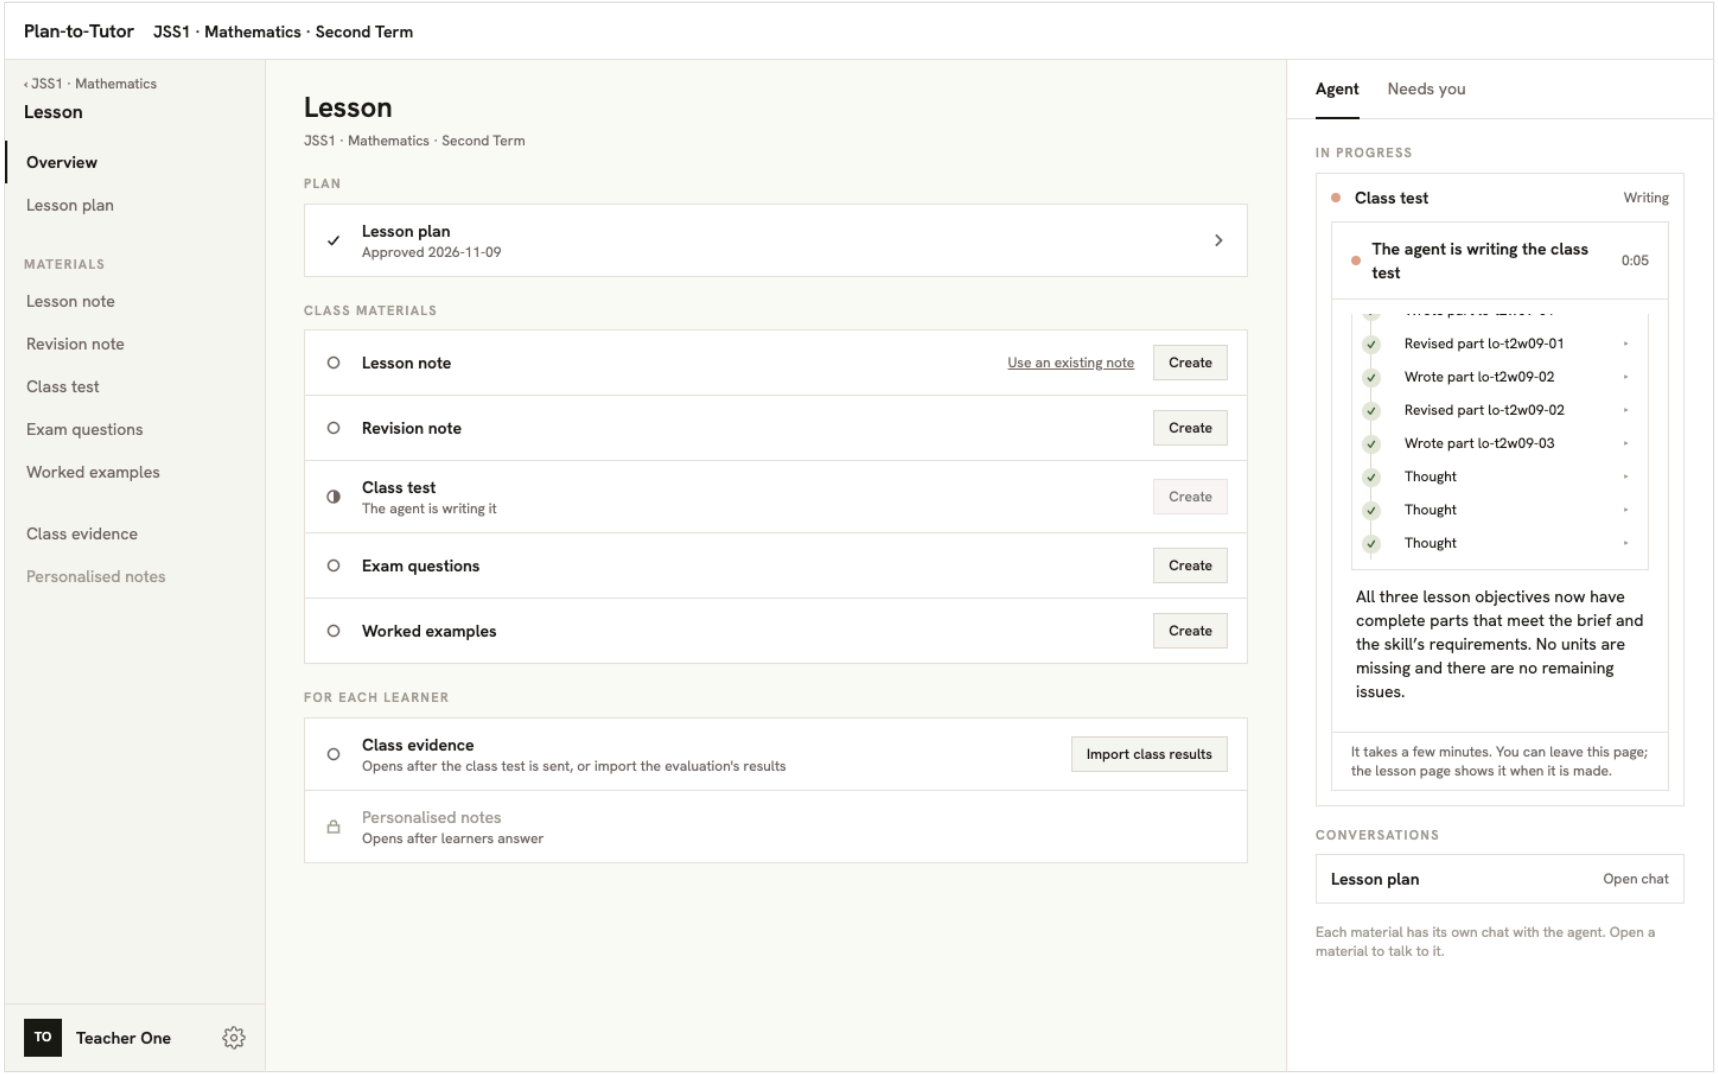

2 min

The reused plan as a draft. Basis for the plan is closed; Approve is in Needs you.

2. Reuse a lesson plan and approve it (continued)

2 min

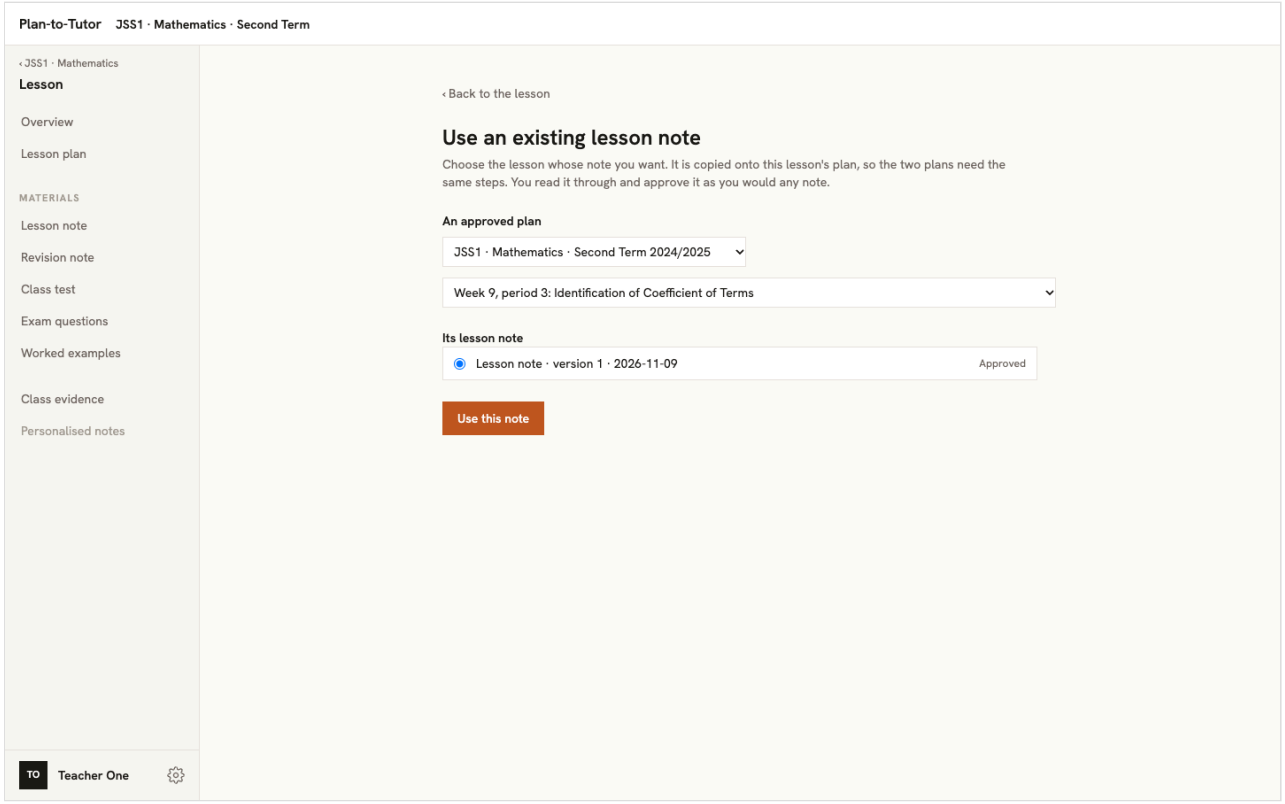

After approval the class test is made (played back). The class materials are unlocked.

3. Reuse its lesson note

1 min

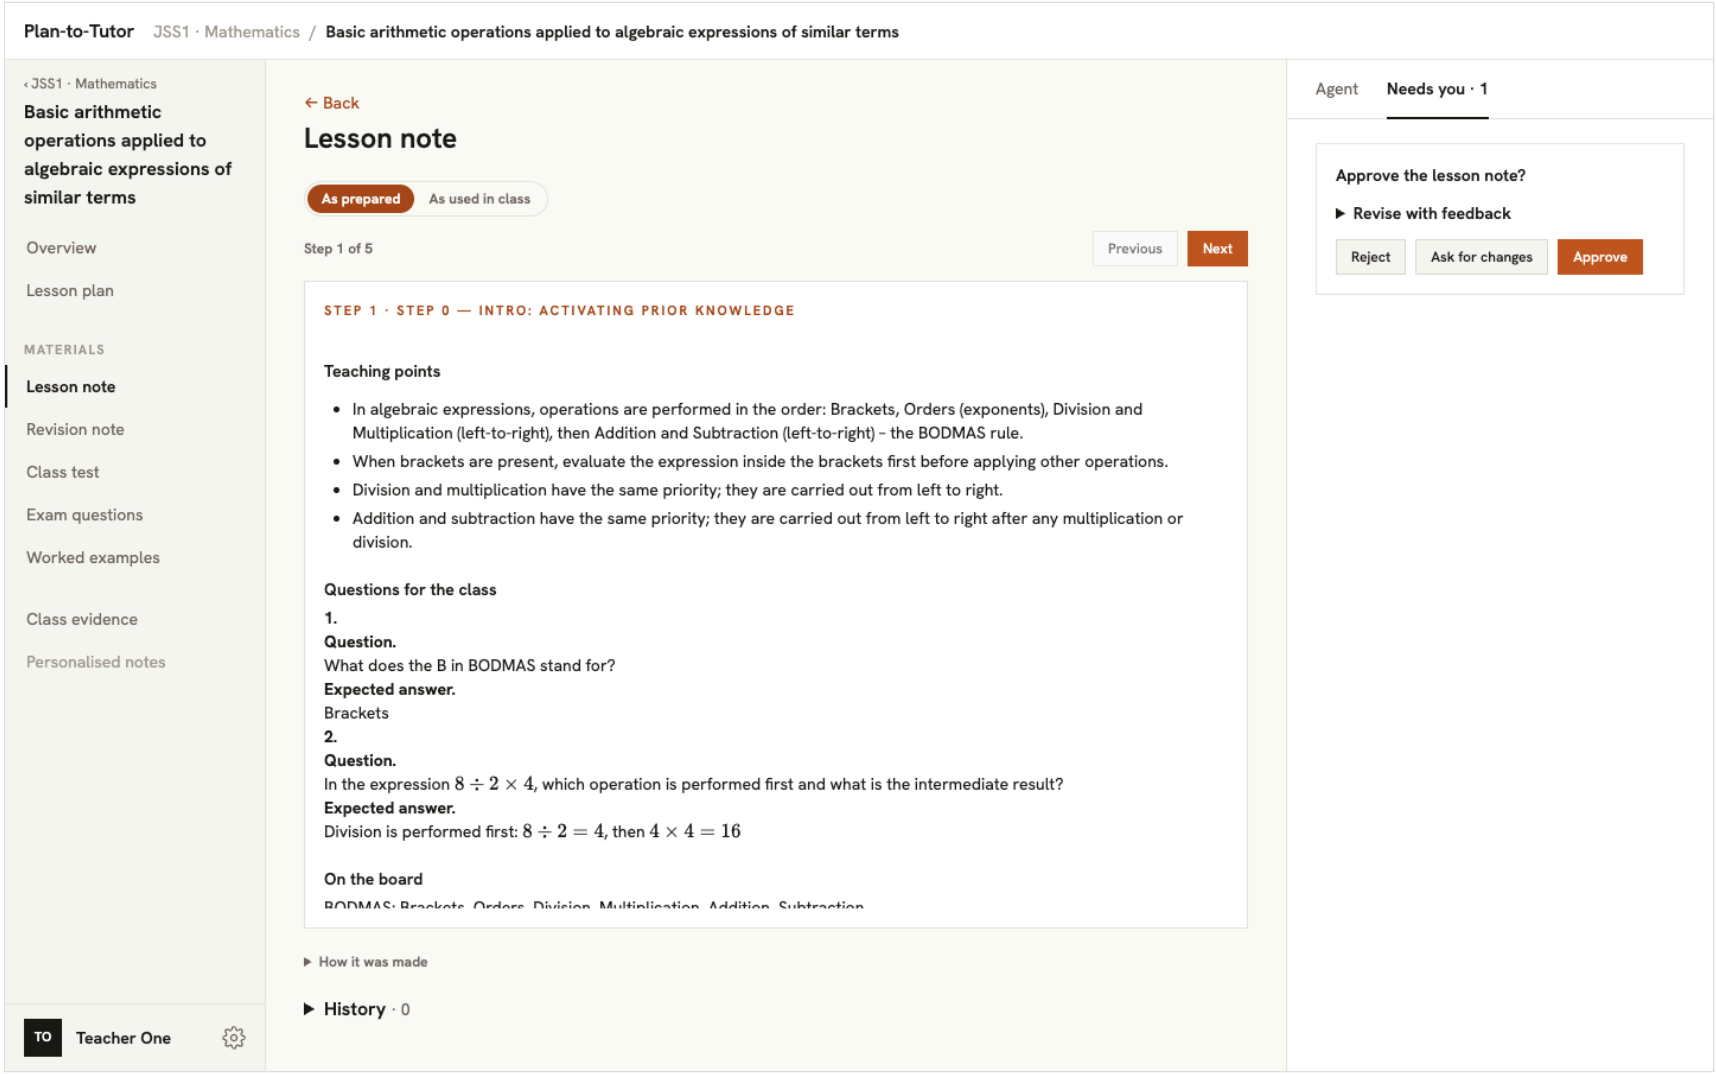

The lesson note row offers Use an existing note. Choose the class and the lesson, then the note version, and click Use this note. The note is copied onto this lesson's plan, which has the same steps. Read a step and approve it.

Choose the lesson whose note to reuse, and the version.

3. Reuse its lesson note (continued)

1 min

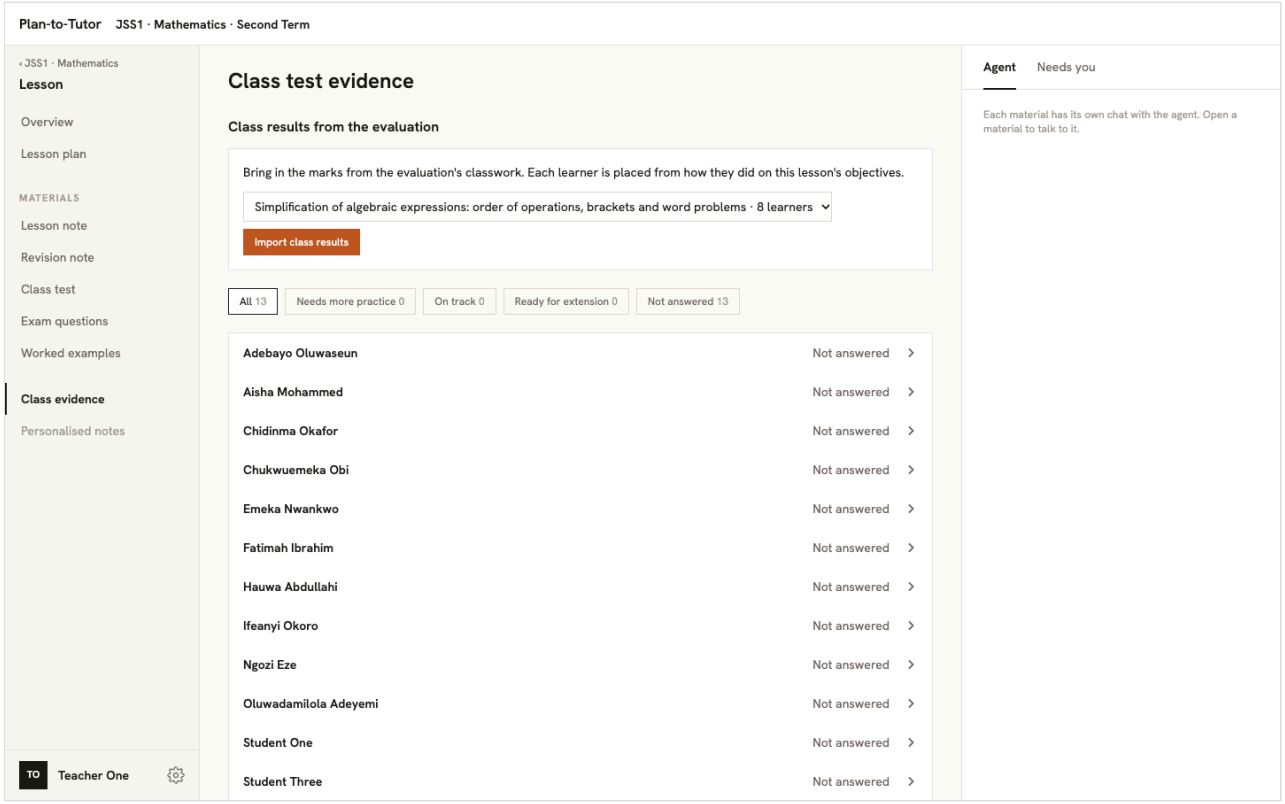

The reused note, ready to read and approve.

4. Bring in the class's results

1 min

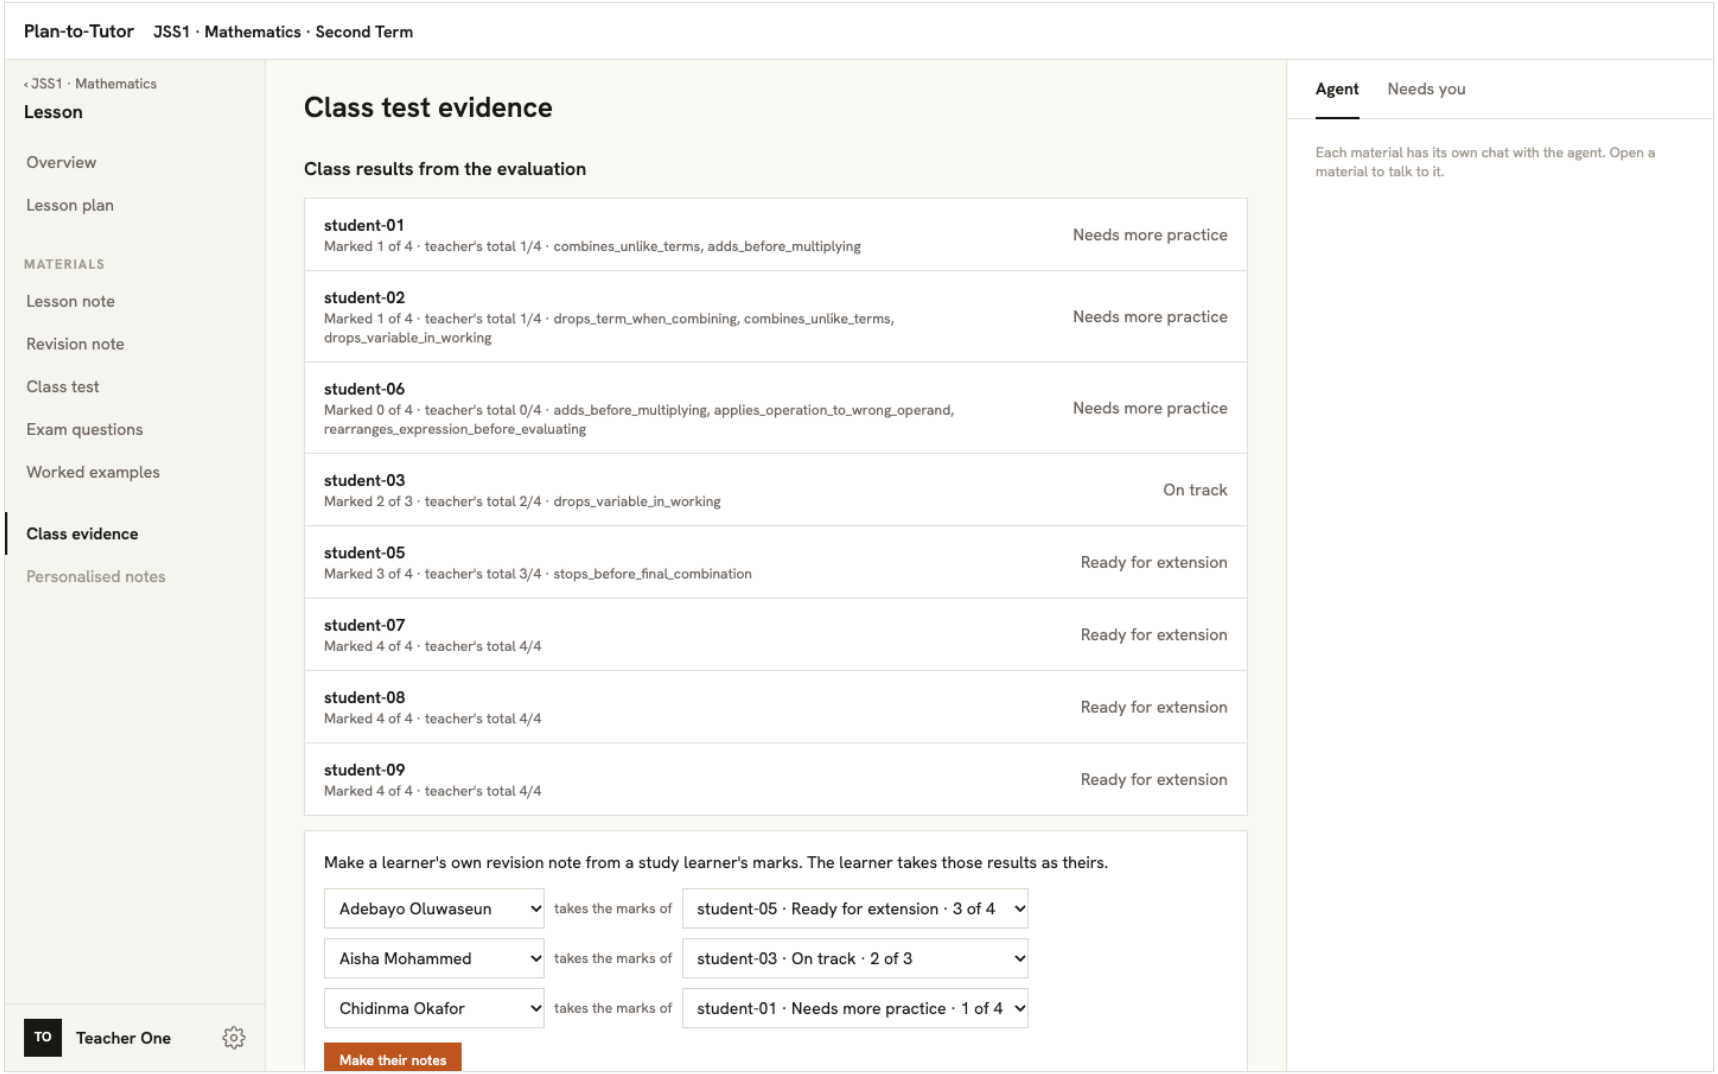

The Class evidence row offers Import class results. Open it. Only the evaluation's lessons whose objectives match this plan are offered. Click Import class results. Each of the study's learners appears with a band, the marks, the teacher's total on the script and the misconception codes.

Class evidence before the import: choose the evaluation lesson.

4. Bring in the class's results (continued)

1 min

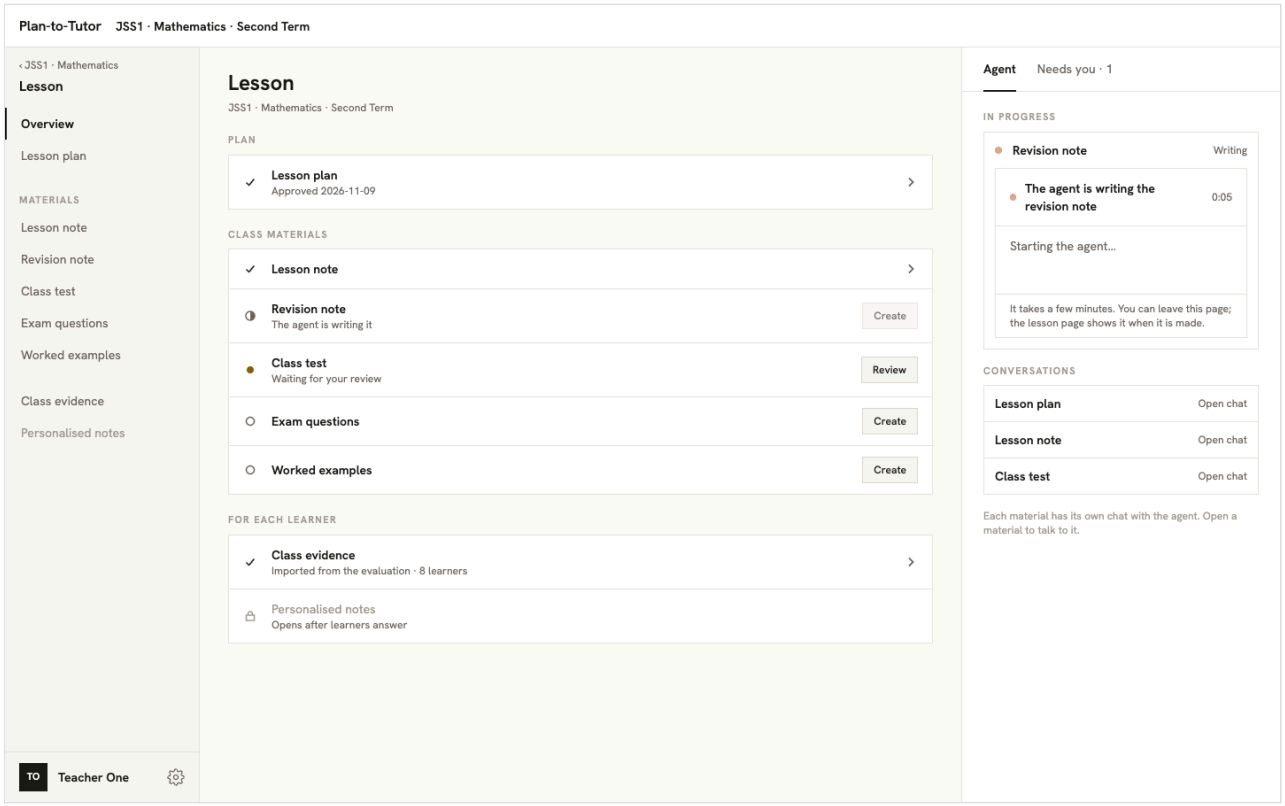

The study's marks for each learner, and below them the panel that gives class learners those marks.

5. A revision note, played back

2 min

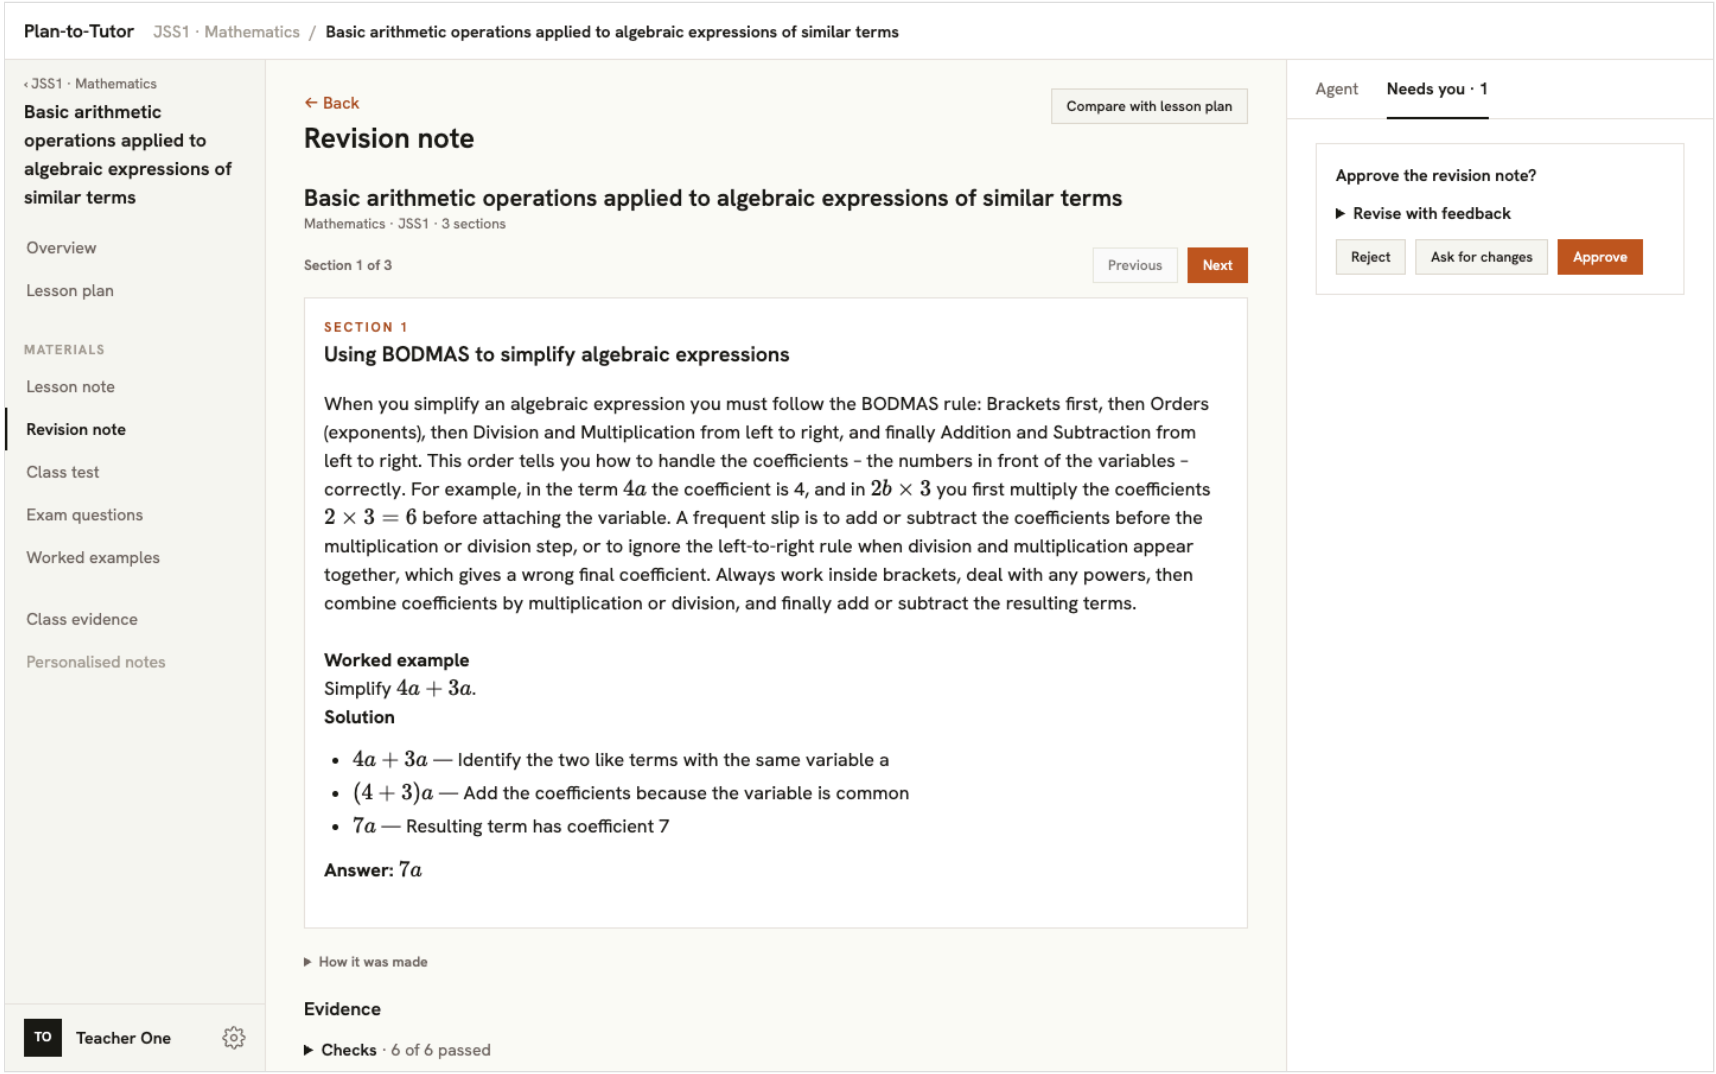

On the lesson home, click Create on Revision note. The In progress panel names what is being made. No model is called. When it finishes, open it, read a section and approve it. To show how a note was made, open the recorded run's replay page: the agent's chat plays beside the note.

The revision note being made: In progress shows what the agent is writing.

5. A revision note, played back (continued)

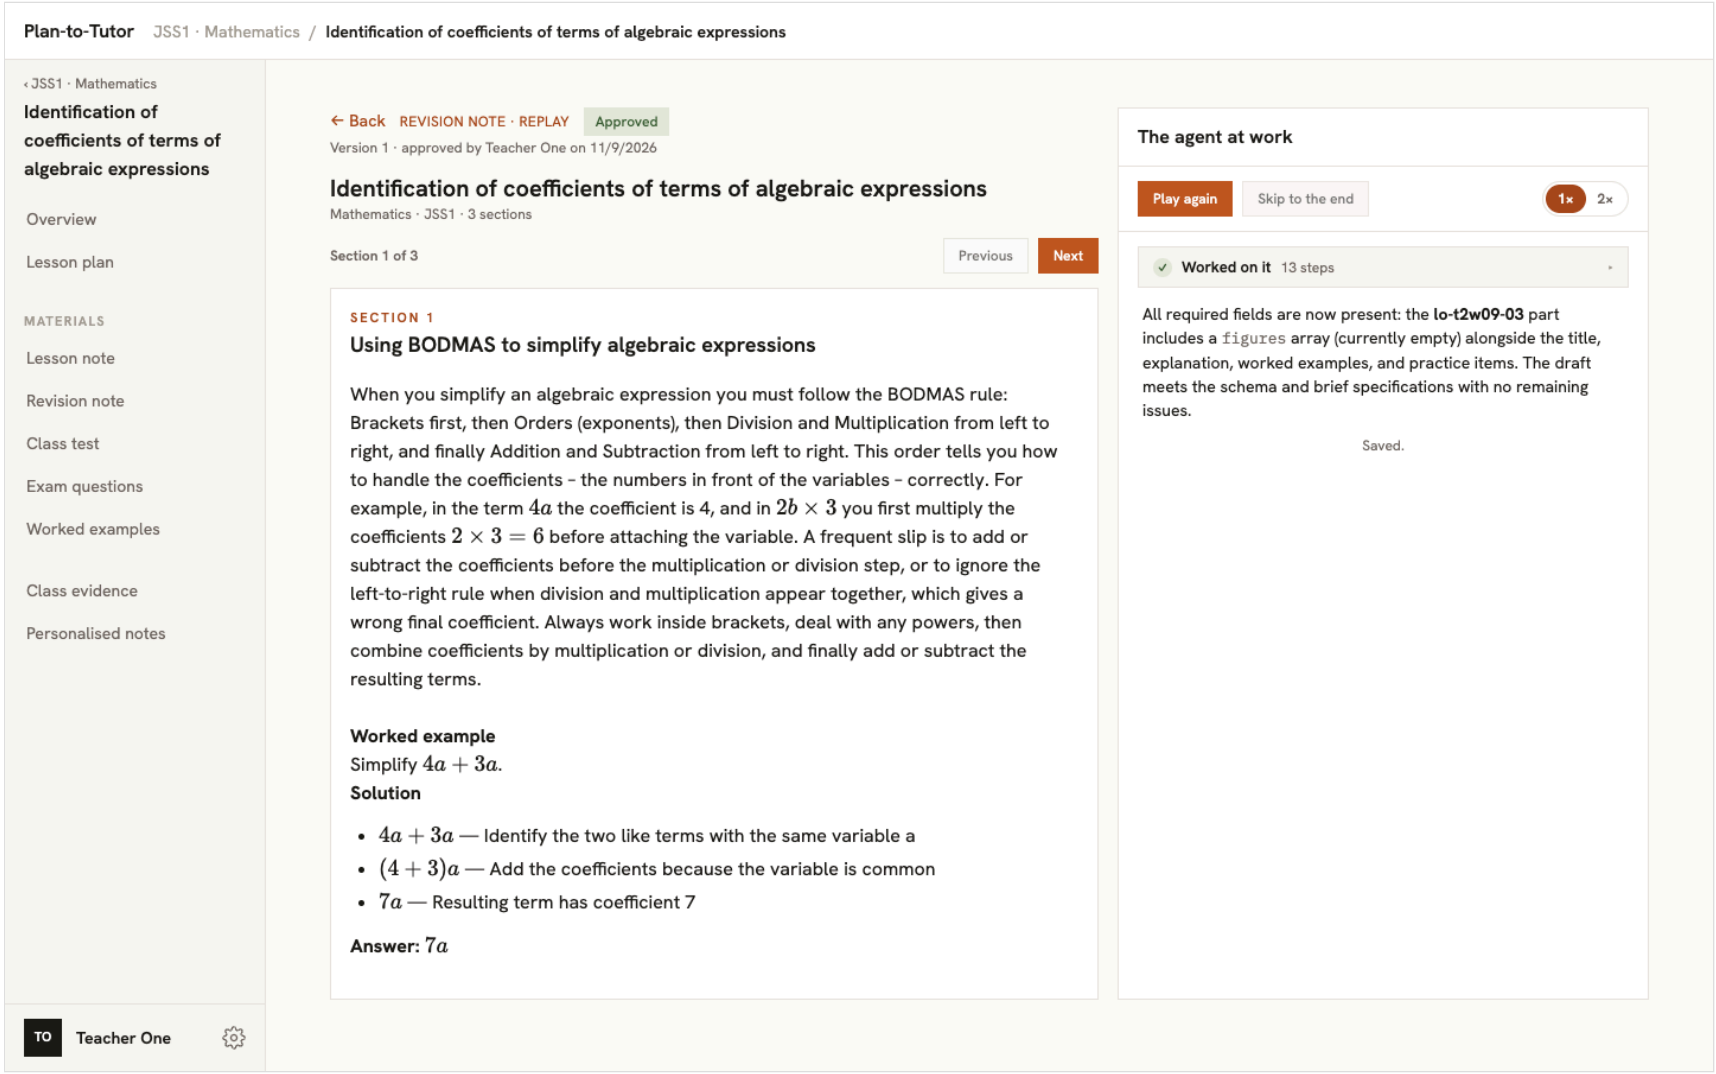

2 min

The finished note, pending the teacher's approval.

5. A revision note, played back (continued)

2 min

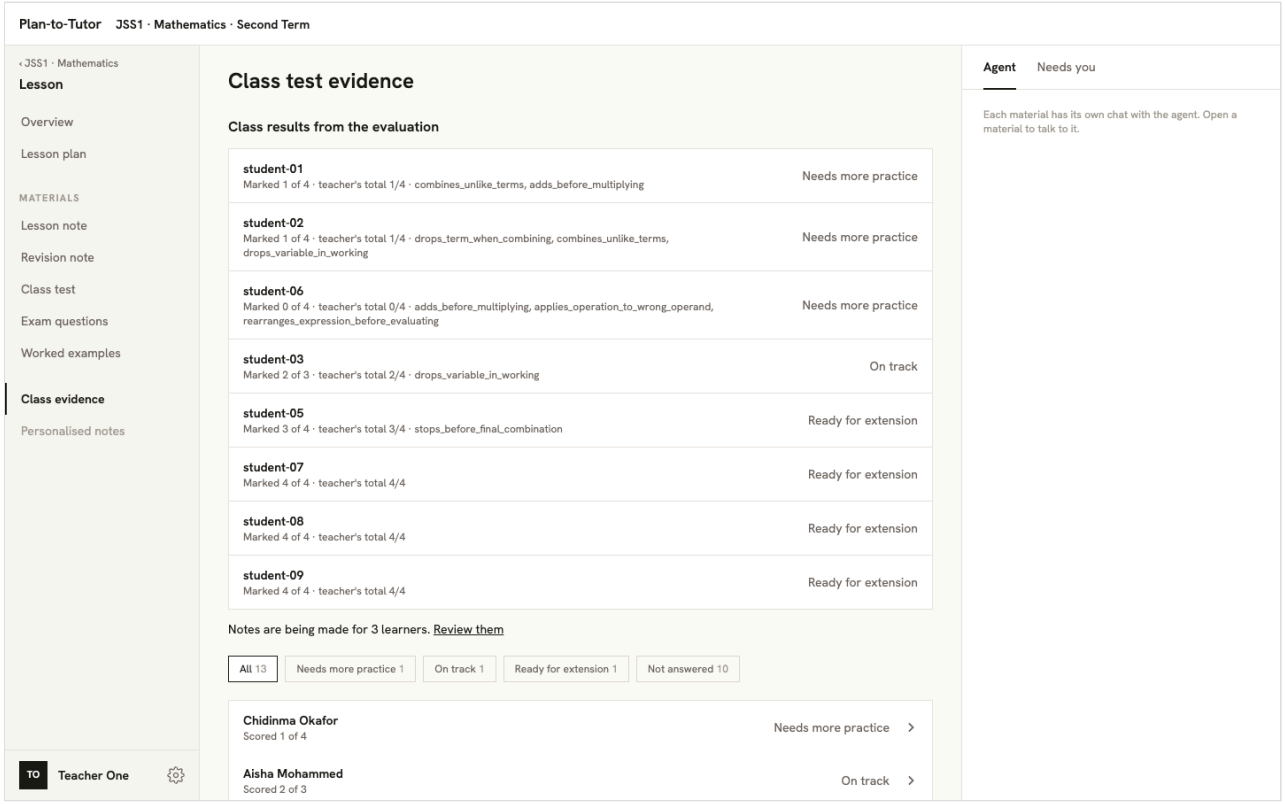

Replay how it was made: the recorded run's chat beside the note.

6. Each learner's own note, played back

2 min

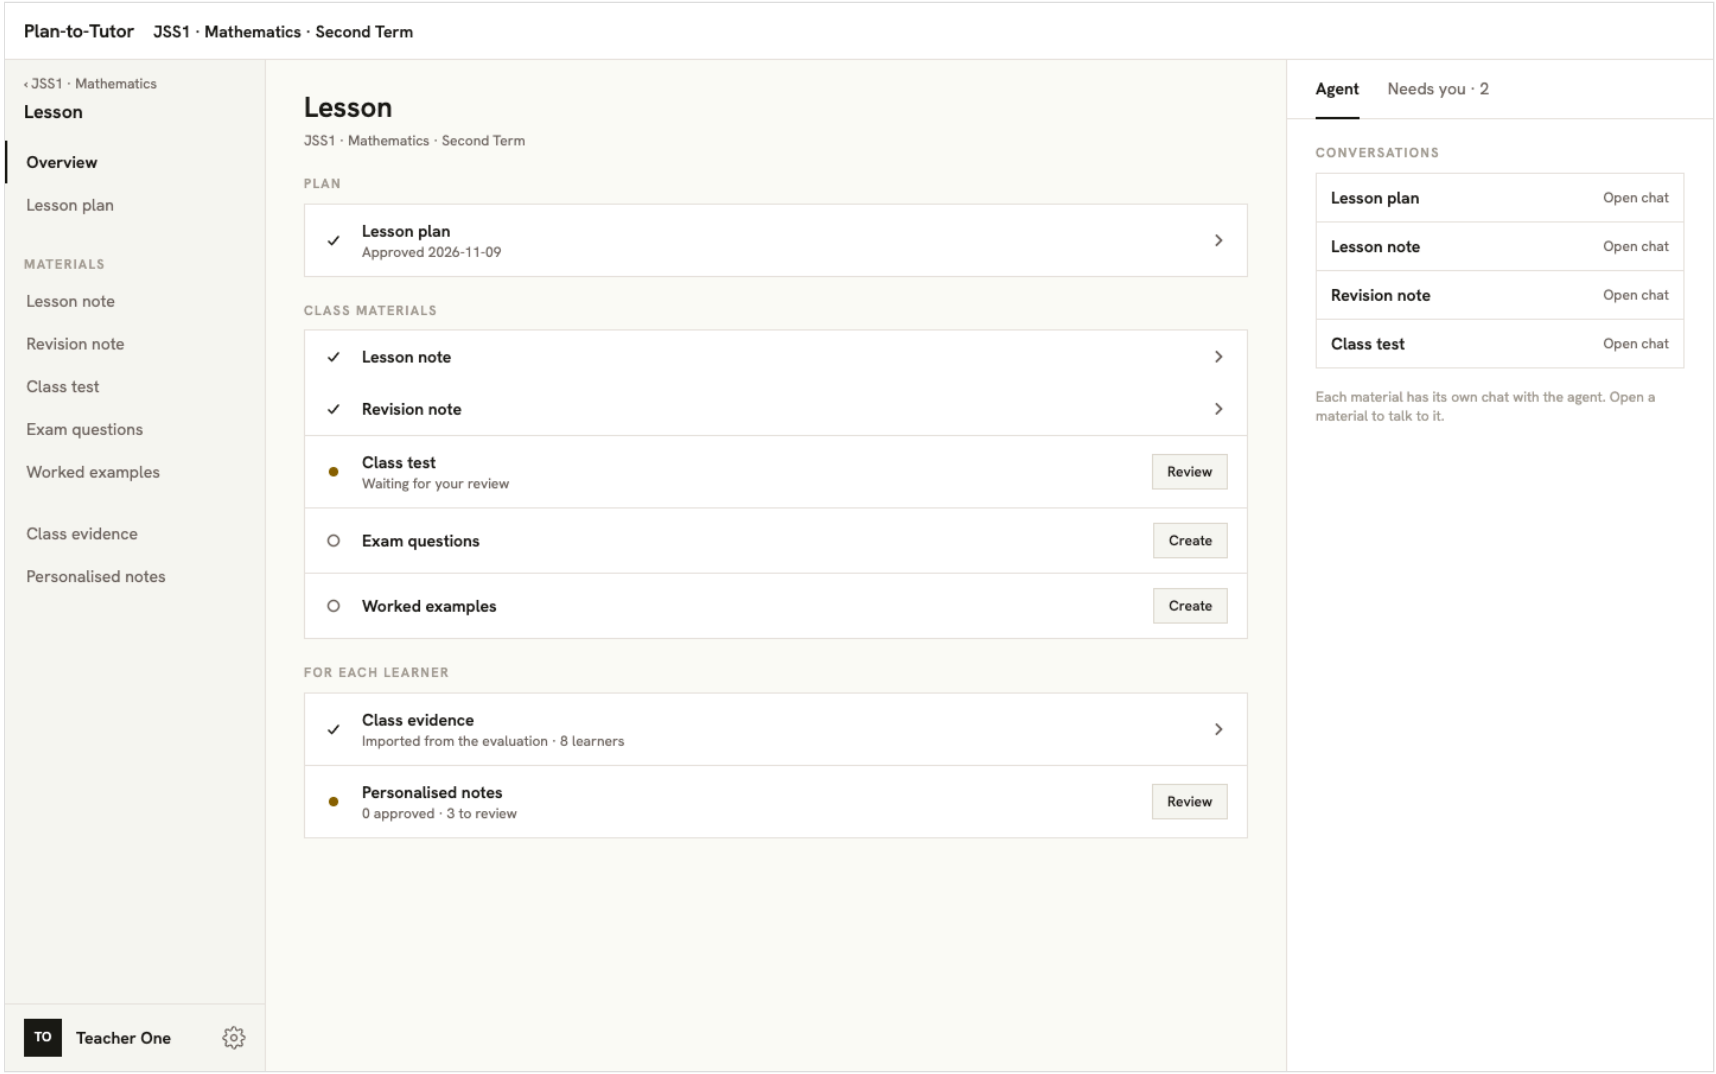

In the panel under the imported results, three class learners are each paired with a study learner: a strength, a middle and a gap. Click Make their notes. Each learner takes those marks as their own and their note is made. Open one note from the extend band and one from the remediate band. They teach the same objective at different levels. Approve one.

Make their notes: the three learners take the study marks as their own.

6. Each learner's own note, played back (continued)

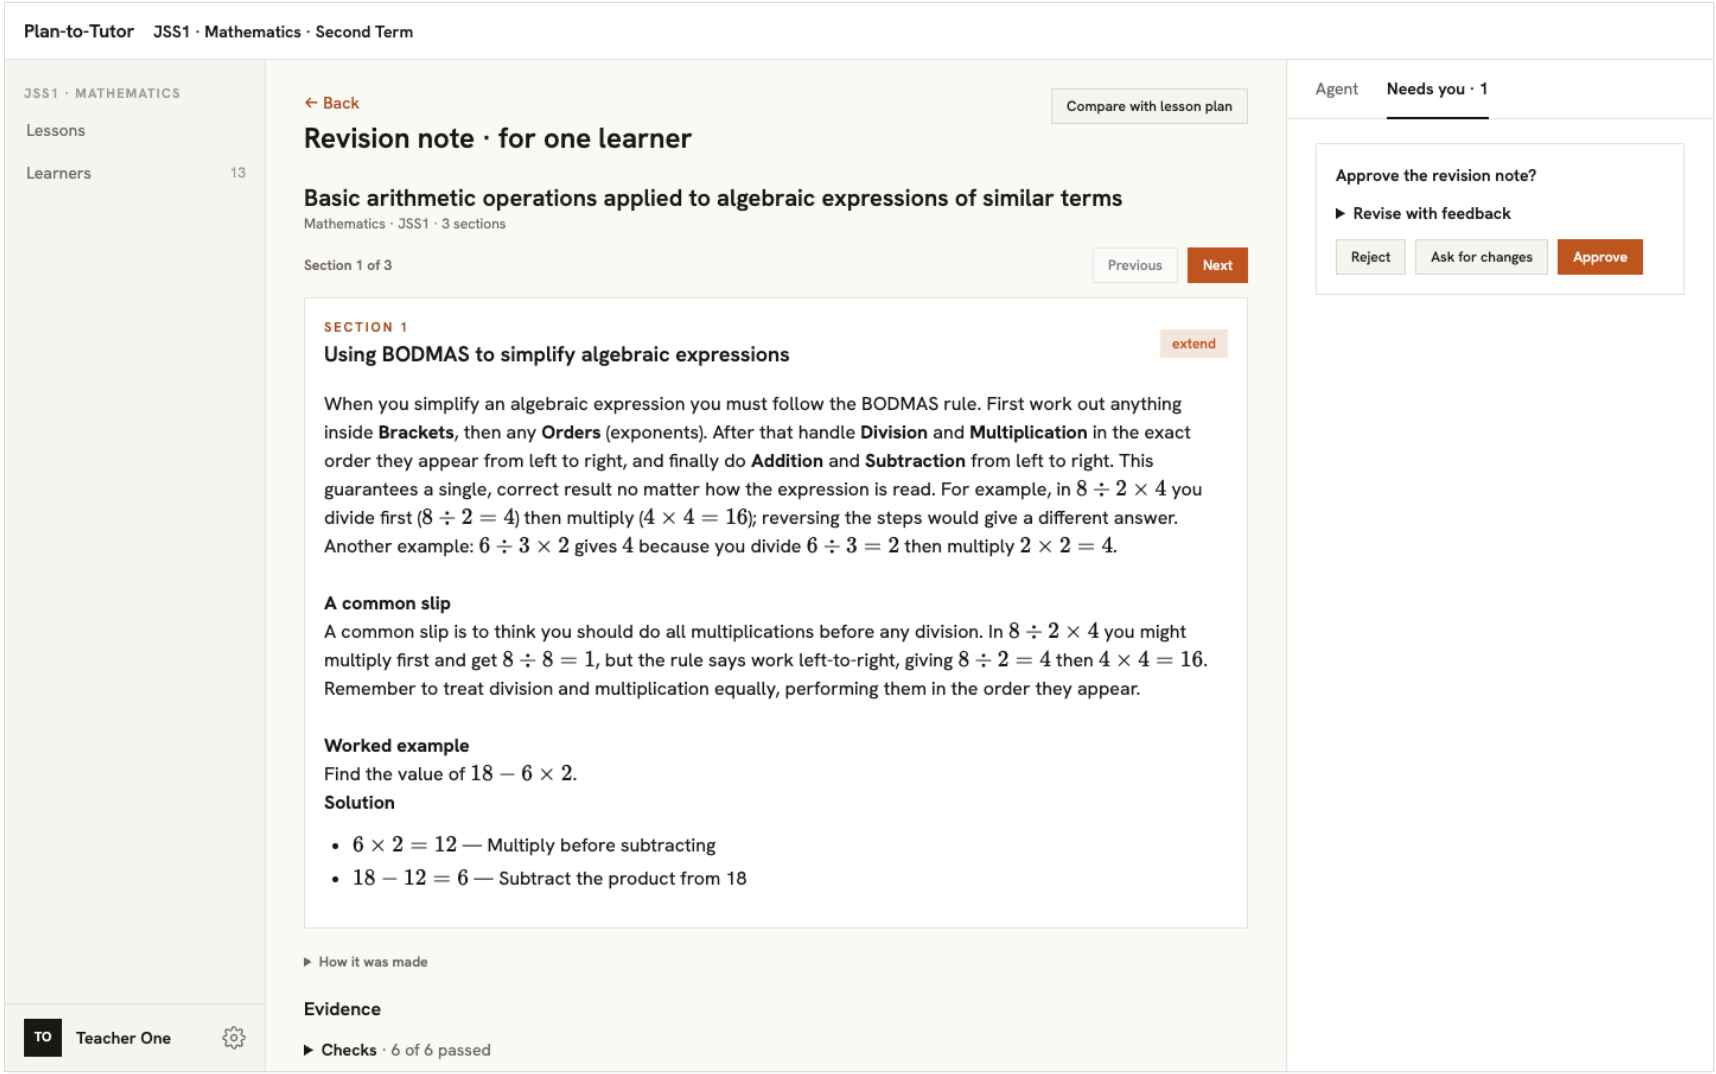

2 min

Personalised notes now wait for review.

6. Each learner's own note, played back (continued)

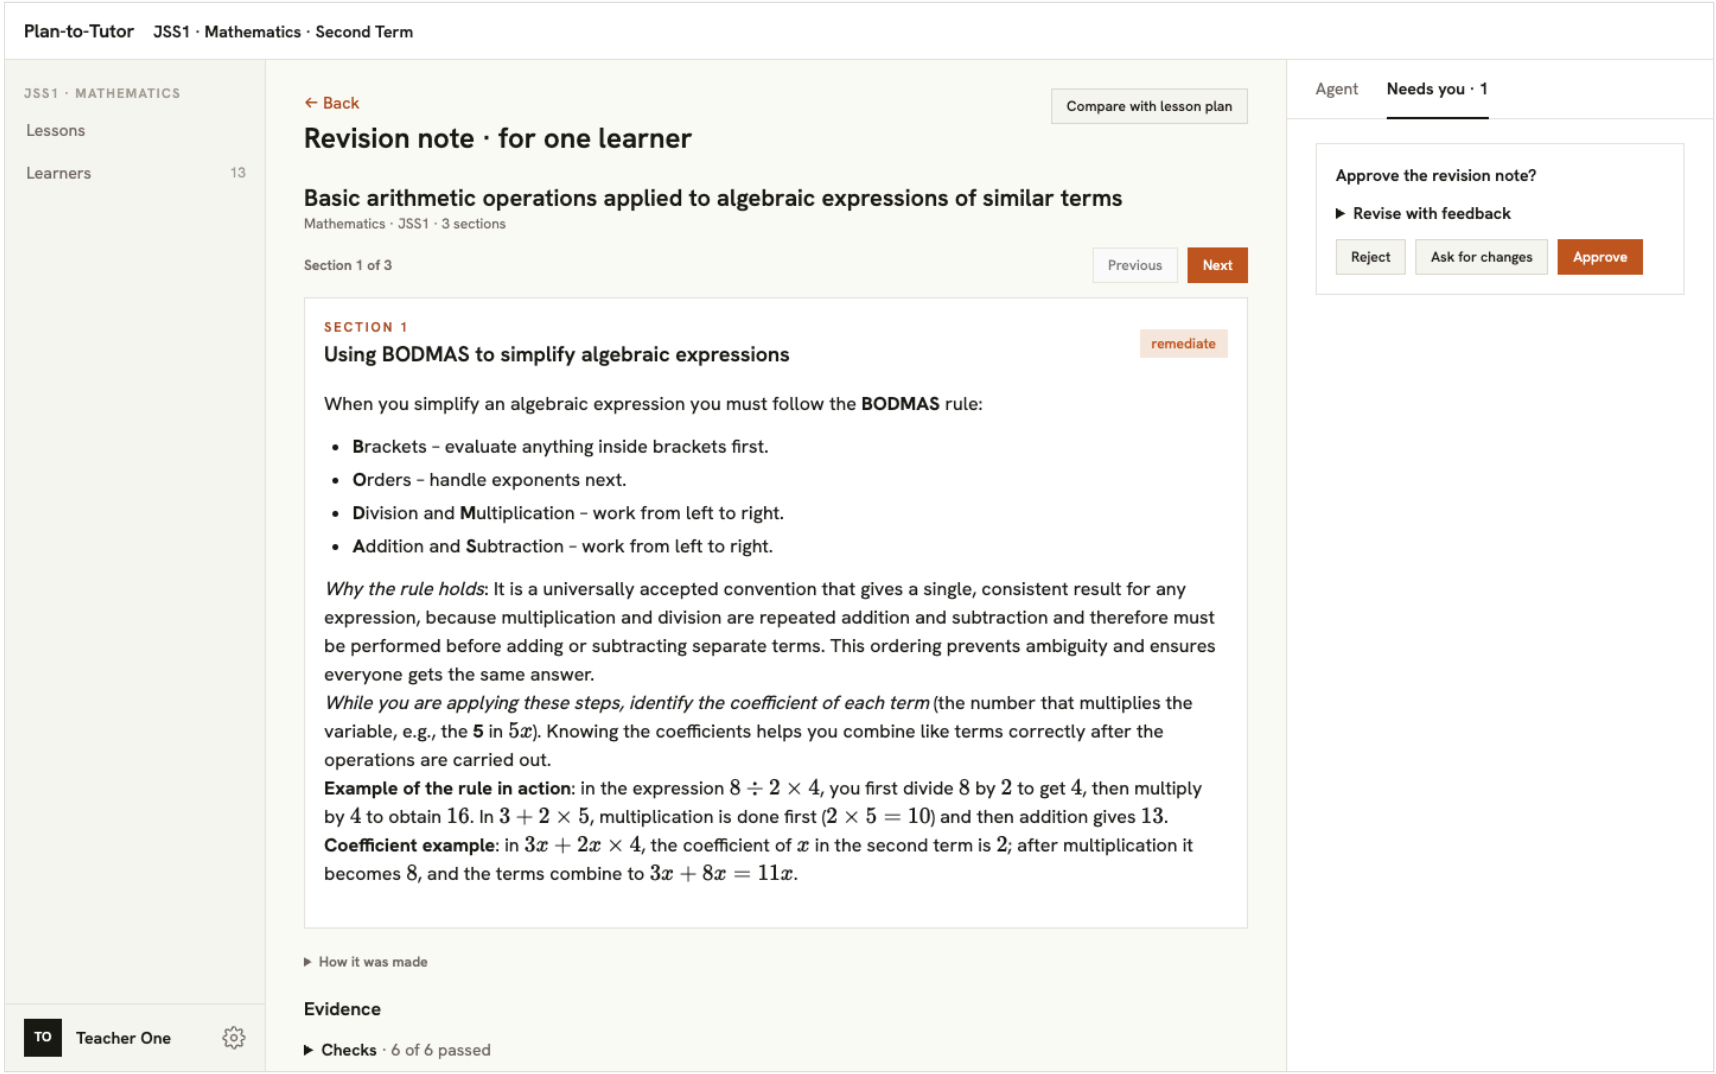

2 min

A learner's note in the extend band.

6. Each learner's own note, played back (continued)

2 min

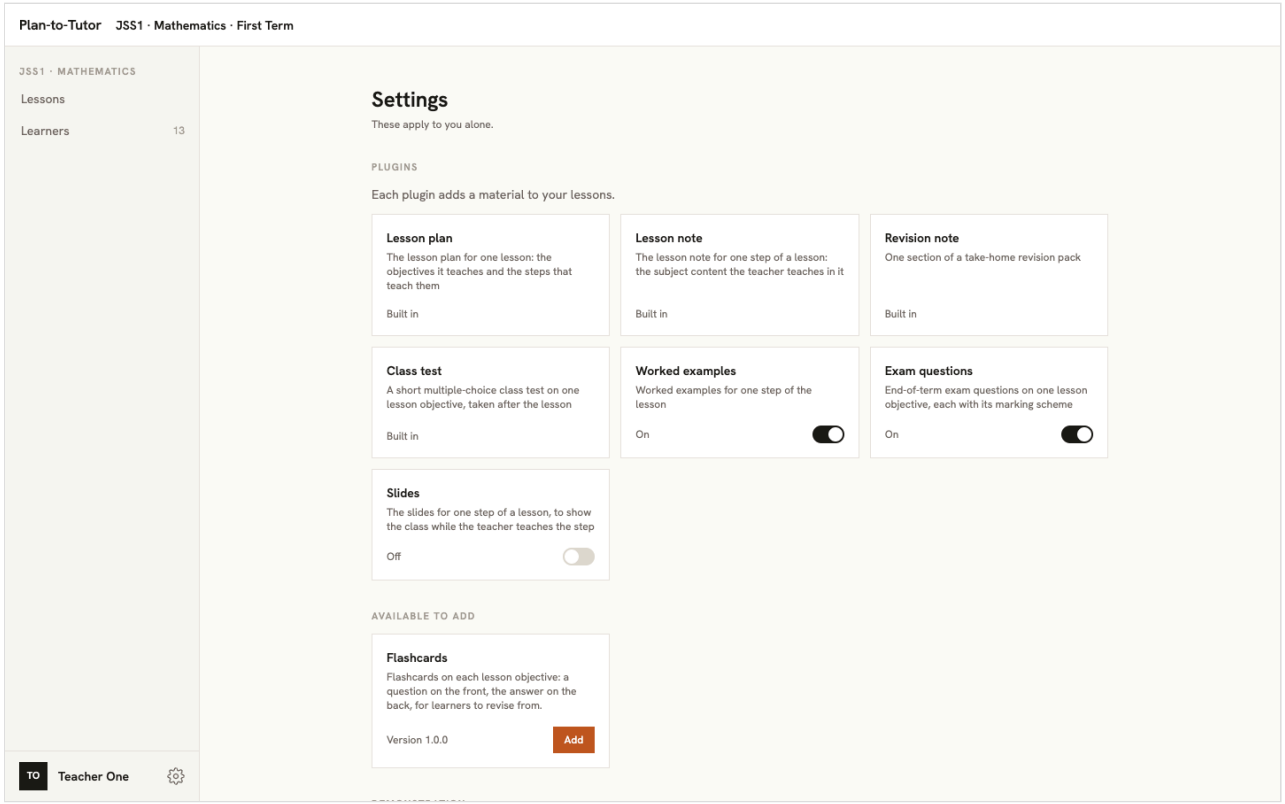

A learner's note in the remediate band, for the same objective.

7. Plugins: switch on slides, show the class deck

3 min

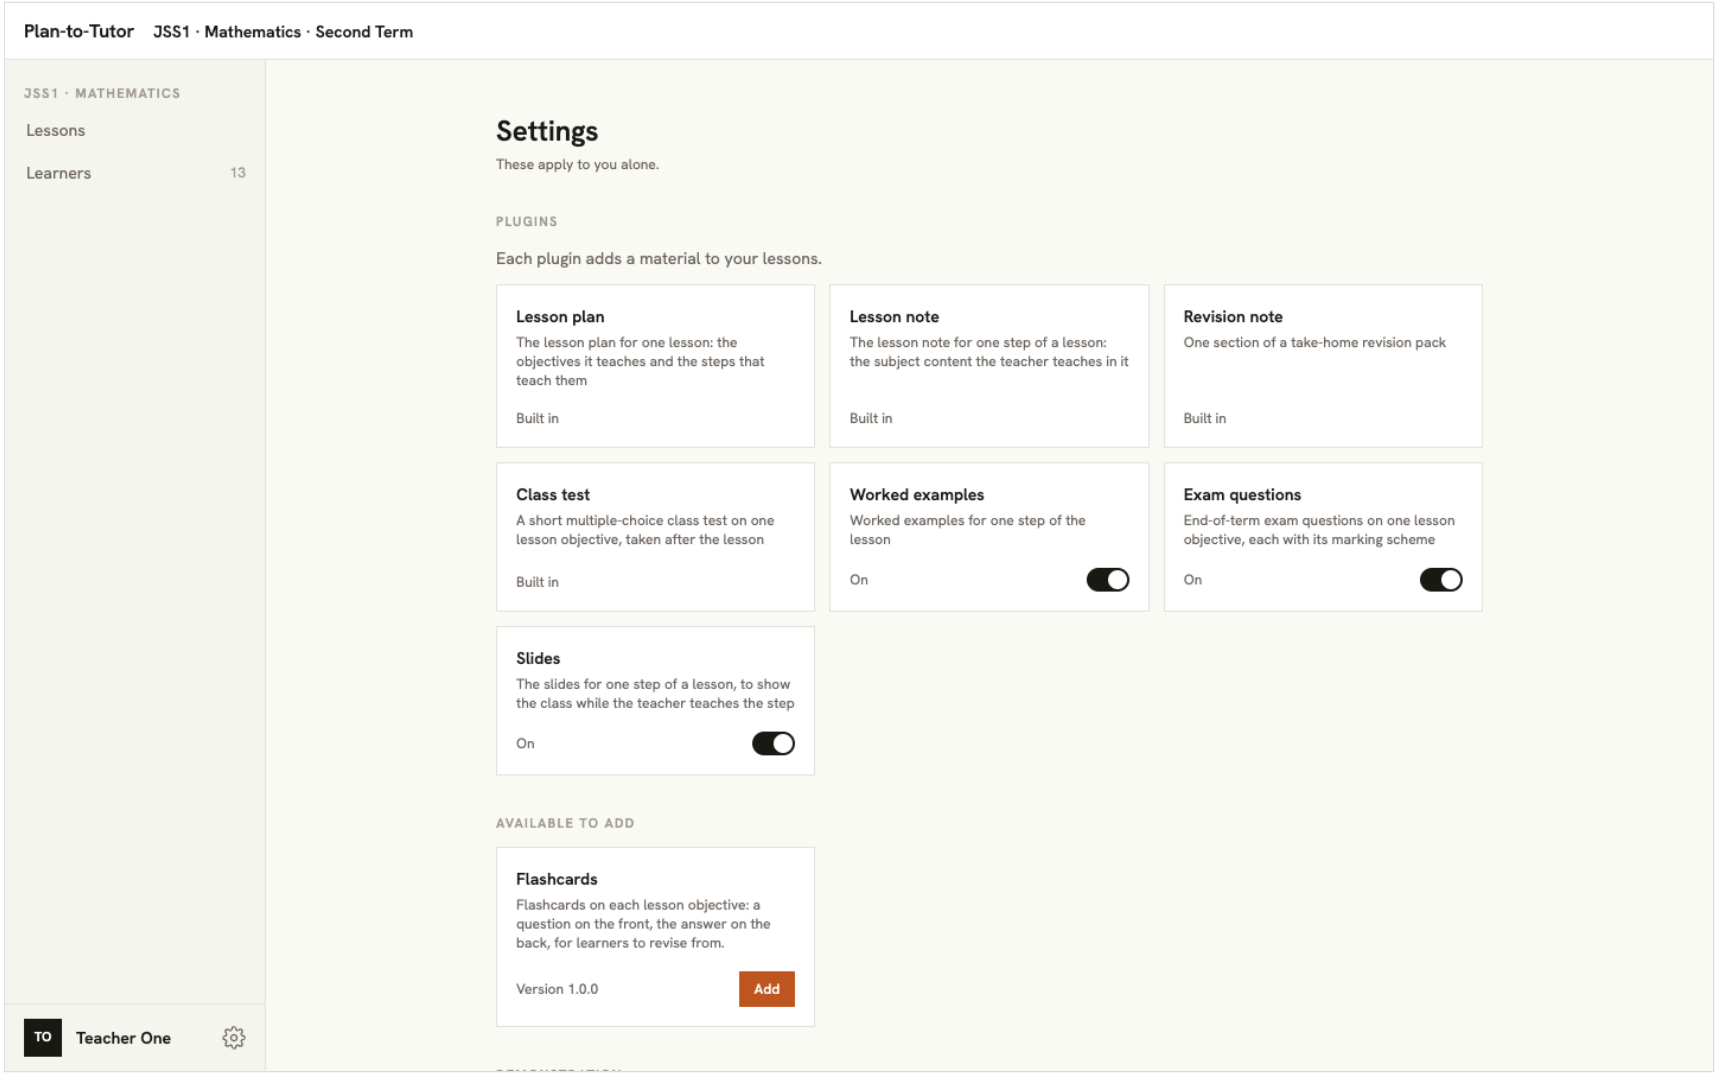

Open Settings. Each plugin is a card; the built-in ones are always on. Slides starts off. Switch it on; Flashcards, under Available to add, has not been added yet. Back on the lesson home, Slides is now listed. Click Create: the deck is played back. Open it and move through three slides. Each has a title, at most five short points and speaker notes. The deck is class-level; it is not personalised per student.

Settings with Slides off and Flashcards available to add. Play back recorded runs is under Demonstration.

7. Plugins: switch on slides, show the class deck (continued)

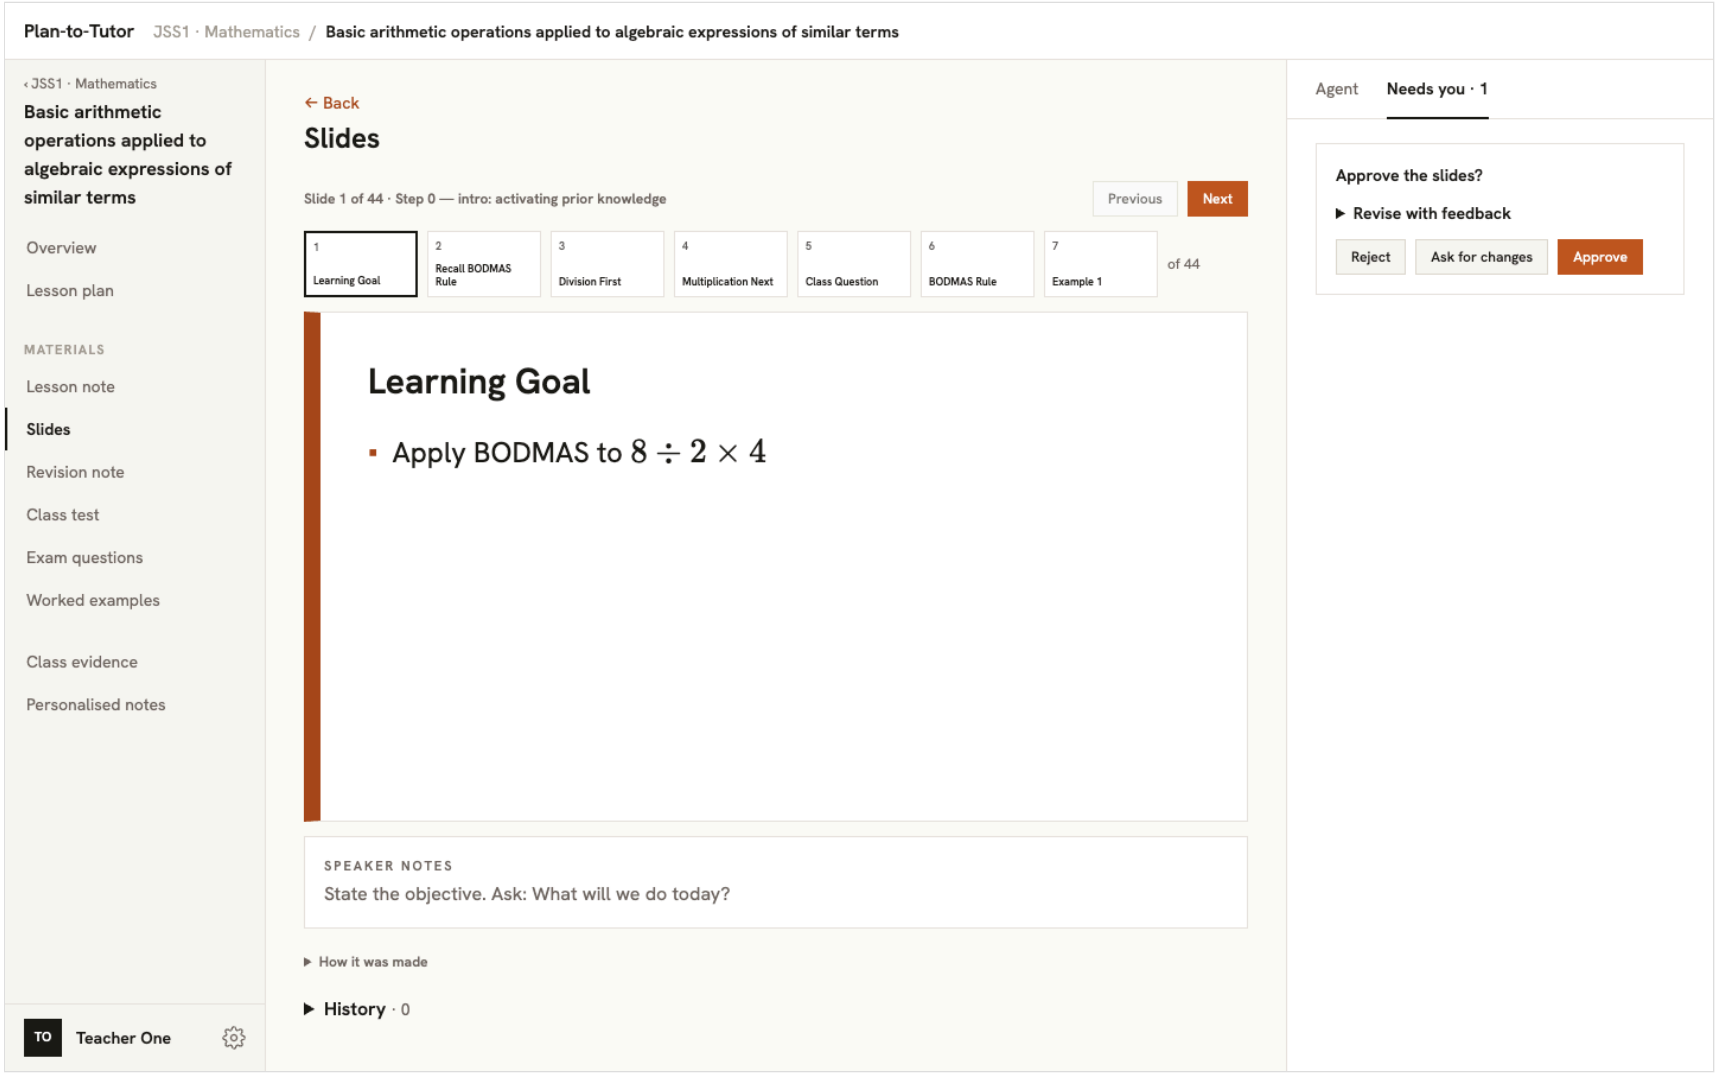

3 min

Slides switched on for this teacher alone.

7. Plugins: switch on slides, show the class deck (continued)

3 min

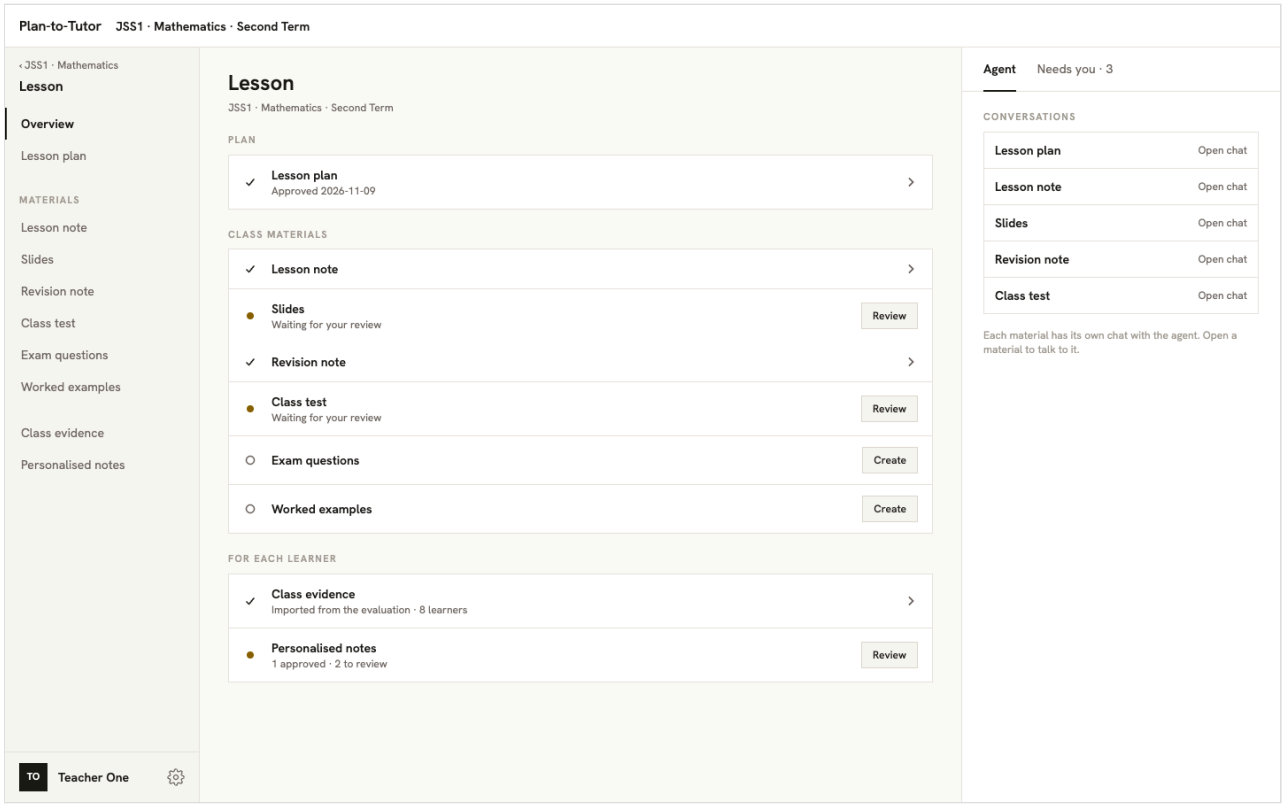

The class deck: title, short points and speaker notes for each slide.

8. The study

3 min

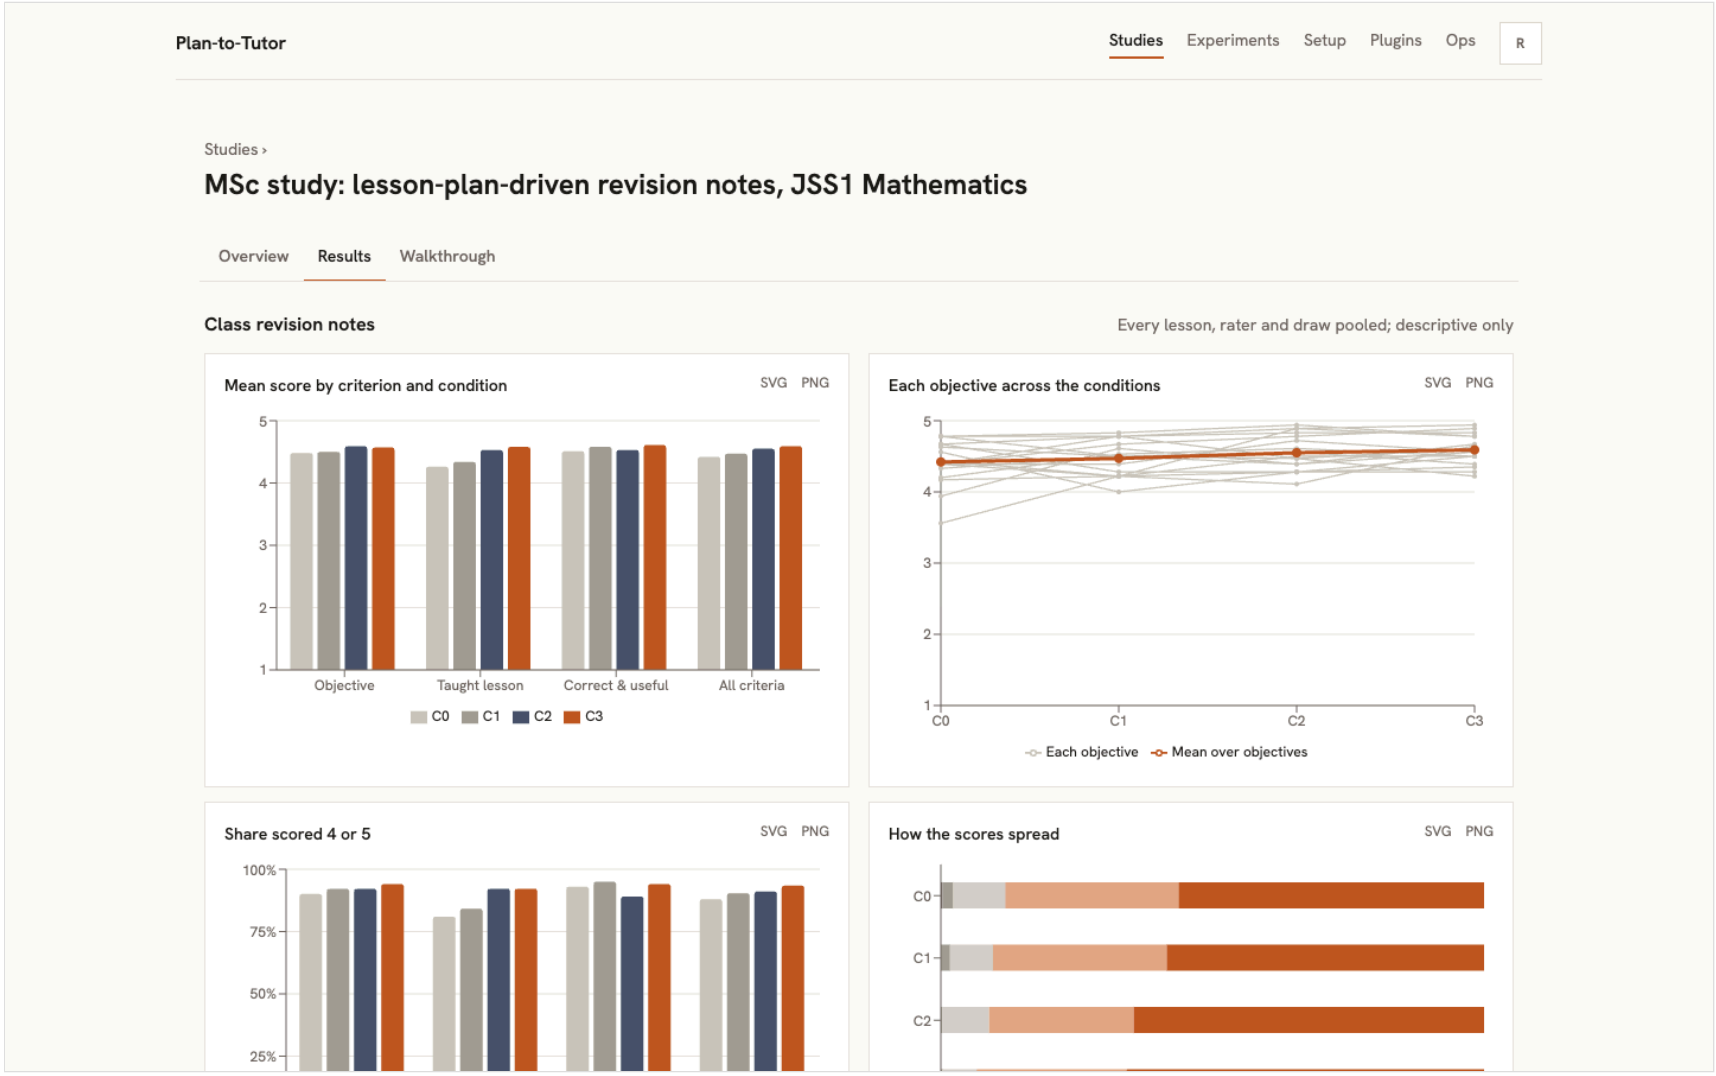

Sign in as the researcher and open the study results: the four conditions compared on the three criteria. Then the walkthrough of the lessons the study used. Do not quote a number that is not in the thesis; read it off the page and match it to Chapter 6.

Back on the lesson: everything made, none of it waiting on a model.

8. The study (continued)

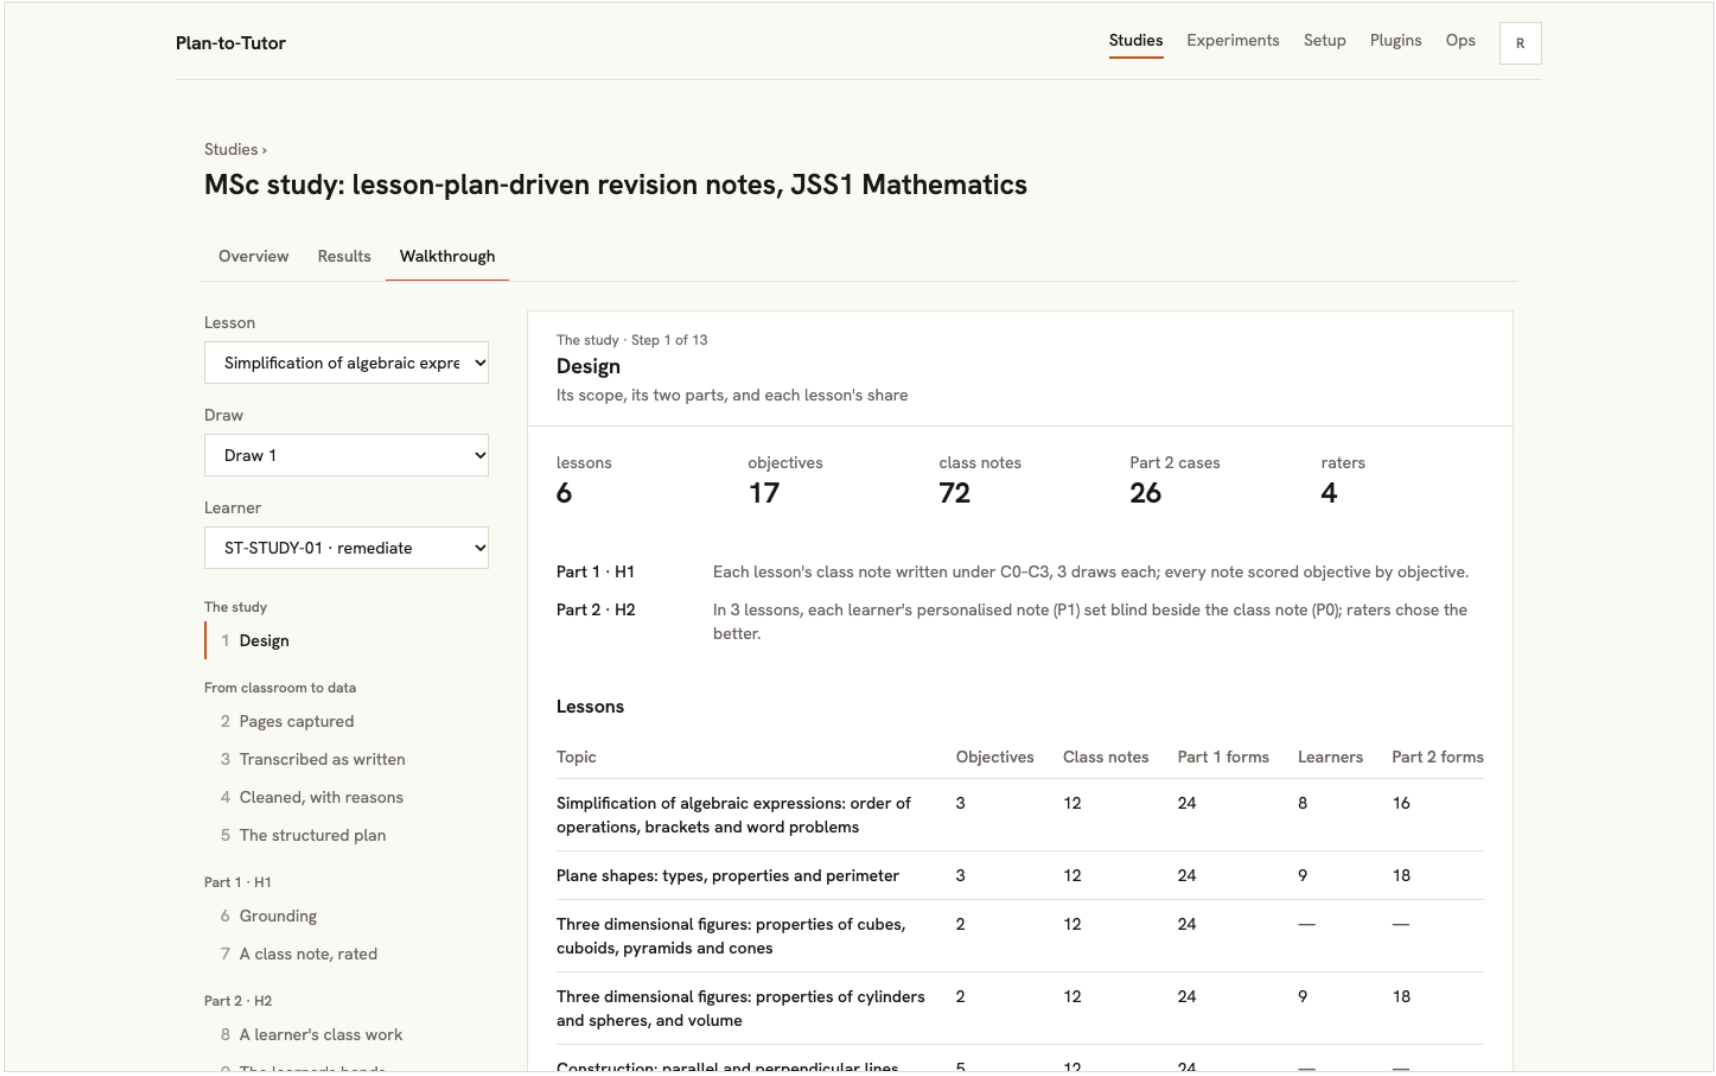

3 min

The study's results.

8. The study (continued)

3 min

The walkthrough of the lessons the study used.
